1. To make an advent calendar, you need 192 sheets (10 x 10 cm format).

2. Fold the paper horizontally and then unfold it again.

3. Fold the upper edge to the line in the middle.

4. Fold along the vertical middle line and then unfold it again.

5. Place the bottom tip on the marked spot. Only press down on the crease along the marked line.

6. Bring the upper tip down and thereby open up the shape.

7. And that's it! Repeat three times with the other sheets.

8. Now, it's getting a little finicky. Open the left element on the right side and slide in the right element a little bit.
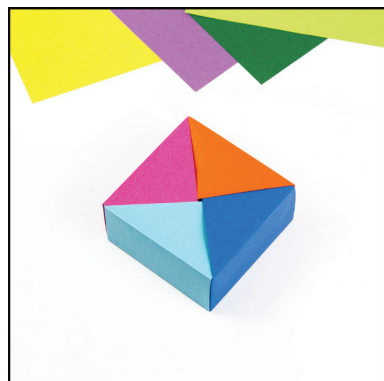

9. Slide in the other elements the same way from the right until all of them are intertwined.

10. Arrange the tips in the middle so they are spiral on top of each other. It helps to turn the object around.

11. Press down the tips with your finger so you can't see them anymore.

12. Carefully push the shape together from all sides. Done! Now you only have to repeat this process 47 more times ;-)

13. That's what it's supposed to look like from the inside.

14. Finally, glue a self-adhesive magnet S-20-01-STIC inside on the box bottoms.

15. Glue the numbers 1 - 24 on the completed boxes.
